ASSIGNMENT ANSWERS

ASSIGNMENT of DAY 2   Name: **DHRUV JAIN**

ANS 1: A computer is a machine (electronic) that takes input or instruction from the user, processes it and then gives an output. Usually, it is used for computing or calculating and accomplishing tasks for the user.

For example, a computer can be used by a user to surf the internet. Make documents, and maintain digital records (Store Data) like banks and schools.

ANS 2: RAM is actually an abbreviation of Random Access Memory. It is volatile in nature (the power supply end means the data stored is lost).

It is fast and also compact because it uses semiconductor technology.

ANS 3: Data is store in the Memory Unit of the CPU in the computer.

ANS 4: The keyboard is that device.

ANS 5: Output devices are those devices which take the output (after the computer has processed the data.) and show it to the user in a form in which humans can understand/perceive it.Example: Monitor, speaker etc.

ANS 6: The Mouse helps the user to move the cursor and pointer.

ANS 7: Machine level language is directly understood by the computer.

ANS 8: Input devices are those devices that take the information (input) from the user to the computer so that the computer can process it. E.g.: Keyboard, mouse, microphone etc.
